US FRONTIER AI RESEARCH OUTREACH

200-target university campaign ledger

Advanced autonomous intelligence - frontier AI - AGI-like capability evaluation - reliable tool use - scientific reasoning - superintelligence safety and verification

Campaign state: 17 new Gmail sends verified in the dedicated US200 label. 9 previously contacted university routes were identified and excluded from duplicate sends. The remaining target slots are a verification queue, not claimed as sent.

Important: A university appearing in this ledger is a potential research-partnership target. It does not mean the university will directly fund or sponsor an unaffiliated researcher. Actual mechanisms may require a faculty PI, appointment, visiting status, sponsored-research agreement, fellowship, gift, joint proposal, or institutional eligibility check.

Tone law for the campaign

Keep public-brand references minimal. Present the work as an independent frontier-AI research direction focused on advanced autonomous intelligence and rigorous evaluation. Avoid grand claims of having achieved AGI or superintelligence. Use those terms only as research frontiers: systems approaching AGI-like autonomy, advanced reasoning, and superintelligence-safety/evaluation questions.

Execution law

Recipient must be a public professional university route, current role must be supported, duplicate history must be checked in Gmail, and every credited send must be verified in SENT. No email-pattern guessing. No bulk blast to unverified addresses. One precise research ask per recipient.

1. Recommended outreach expression

Subject: Frontier AI research exchange - advanced autonomous intelligence and evaluation

Core message:
Dear [Professor/Director/Team],

I am an independent researcher developing a frontier-AI research direction around advanced autonomous intelligence: long-horizon reasoning, tool use, retrieval-grounded behavior, verification, self-correction, and reproducible evaluation of failure modes.

I am looking for a university research environment where these questions can be treated as rigorous systems-and-evaluation problems rather than broad AGI claims. I would like to identify the right faculty, lab, or sponsored-research pathway for a small contribution-first external collaboration.

I can provide a one-page, non-confidential concept note centered on one falsifiable question, a reproducible benchmark design, and a tightly scoped first phase. If another PI or research program is a stronger fit, I would greatly appreciate your referral.

Best regards,
Zouhair Moussaif

Personalization anchors

Use only 1-2 institution-specific anchors: a current AI institute, sponsored-research pathway, recent frontier-AI program, trustworthy/agentic AI work, reasoning/inference-time research, autonomous systems, AI-for-science, or a directly relevant PI. Avoid long brand descriptions.

2. Newly sent and Gmail-verified university outreach

3. Previously contacted routes excluded from duplicate sending

University	Existing route	Reason
Stanford University	rushdi@stanford.edu	Existing Stanford HAI outreach in Gmail
Harvard University	kempnerinstitute@harvard.edu	Existing Kempner Institute outreach in Gmail
Columbia University	datascience@columbia.edu	Existing Columbia DSI outreach in Gmail
Carnegie Mellon University	swerner@andrew.cmu.edu	Existing CMU research outreach in Gmail
Johns Hopkins University	mdredze@cs.jhu.edu	Active Mark Dredze research thread
Rice University	kenkennedy@rice.edu	Existing Ken Kennedy Institute outreach in Gmail
Ohio State University	tdai@osu.edu	Existing TDAI outreach in Gmail
University of Michigan	AIIM-Info@umich.edu	Existing AI Institutes at Michigan outreach
New York University	cdsindustry@nyu.edu	Existing NYU CDS outreach in Gmail

These are useful research relationships, but the US200 campaign should not resend the same generic opener. Only a materially new, context-specific follow-up or a distinct verified decision-maker lane should be used.

4. Master 200-target university ledger

Two target lanes per institution: (1) frontier AI / AGI research leadership and (2) sponsored research / external partnerships. 'VERIFY CONTACT - QUEUED' means the institution is a target, but no email address is approved until independently verified on a public professional source.

ID	University	Lane	Status	Contact / Route	Evidence / Next action
1	Massachusetts Institute of Technology (MIT)	Frontier AI / AGI research leadership	SENT NOW - GMAIL VERIFIED	glennw@mit.edu	MIT CSAIL research collaboration / alliances route
2	Massachusetts Institute of Technology (MIT)	Sponsored research / external partnerships	SECOND-LANE QUEUE	Find separate sponsored-research / external-relations decision-maker	No duplicate email to same recipient; second lane only after independent verification.

5. Operational scoring and next-step protocol

Priority A - Send-ready: official current university page + named decision-maker or official research-contact mailbox + strong fit + no Gmail duplicate.

Priority B - Verify next: strong institution/program fit but recipient still needs independent confirmation.

Priority C - Hold: generic contact only, unclear external-collaboration route, or evidence suggests an internal-only funding mechanism.

Follow-up: no more than two proactive follow-ups without engagement. A substantive human reply preempts cold discovery.

Research ask: one falsifiable question, one benchmark/evaluation design, one small first phase, and an explicit request for the correct PI/pathway if the recipient is not the owner.

6. Campaign accounting

Master target slots: 200

New Gmail-verified sends in US200 label: 17

Previously contacted / deduped institutions listed: 9

Remaining slots: 174 target slots requiring route verification or second-lane qualification.

The ledger intentionally does not convert unverified target slots into fake sends or guessed email addresses. The campaign can be expanded incrementally by verifying high-priority institutions and sending individually grounded outreach.
